Environmental Dimension	85	82
Social Dimension	81	77

Peugeot SA leads the Automobiles industry in RobecoSAM's Corporate Sustainability Assessment based on its Total Sustainability Score in 2018. This report provides a broad overview of the performance of the Automobiles industry and the relative positioning of Peugeot SA at the dimension and criteria level.

Industry Drivers

The automobile industry is under regulatory pressure, both in terms of performance and design. Fuel efficiency is now one of consumers' main criteria when choosing an automobile. Innovation is the cornerstone to companies' long-term success, whether it be via simple engine enhancements or products like electric- and hybrid-powered vehicles. This will increase supply chain complexity and automobile manufacturers must carefully assess risks (such as dependency on critical suppliers and the use of rare earth elements) and opportunities (e.g. material innovation and recycling) across the entire value chain. Finally, robust corporate governance structures and compliance practices are critical to ensure compliance with environmental standards and avoid future reputational and legal issues.

Company Performance

RobecoSAM has selected the most relevant criteria in each sustainability dimension based on their weight in the assessment and their current or expected significance for the industry. The spider chart below visualizes the performance of the industry leader against the best score achieved in each criterion and the median industry score.

Corporate Sustainability Assessment

The RobecoSAM Corporate Sustainability Assessment (CSA) is a comprehensive annual evaluation of companies' sustainability practices and performance. Every March, RobecoSAM extends invitations to over 3,500 of the largest, listed companies globally to participate in the assessment by completing an in-depth questionnaire. Assessment results are published in September, following the analysis of companies' submissions complemented by additional research performed by RobecoSAM.

RobecoSAM's CSA is one of the longest standing ESG rating methodologies worldwide, dating back to 1999. The CSA assesses companies on the basis of 80 – 120 industry-specific questions across 60 industries focusing on financially material economic, environmental, and social factors that are relevant to companies' success, but that are under-researched in conventional financial analysis. Every year, the CSA undergoes rigorous methodological review in order to ensure that the most current material sustainability topics, as well as emerging, long-term sustainability themes often of interest to investors are reflected, and companies are challenged on topics that lack disclosure today.

The results of the CSA are used for the annual rebalancing of the iconic Dow Jones Sustainability Indices (DJSI) and are made available to investors, researchers, and non-governmental organizations through the Bloomberg Professional platform. The results of the CSA are also used for the creation of the RobecoSAM Sustainability Yearbook, one of the most comprehensive annual publications on corporate sustainability.
